## A CHECKLIST OF THE DRAGONFLIES & DAMSELFLIES OF NEW HAMPSHIRE

This checklist includes all species currently known to occur in New Hampshire, plus a few (preceded by an asterisk) that are expected to occur based on their distributions in neighboring states. Most species are well-distributed throughout the state, but for those that are not, a distribution code is included after the species' name:

N = primarily in north (White Mountains northward)
S = primarily in the south (south of White Mountains)
SE = primarily in southeast (east of Merrimack River valley)
C = primarily near the coast
R = restricted to large rivers

Species that are not to be expected, even within their normal range, are marked "rare."

Finally, species whose flight period is somewhat restricted are indicated either "spring" (May-June) or "fall" (August-October).

The vouchering category for the NH Dragonfly Survey is given in the column to the left of each species. These codes are as follows:

V = visual identification sufficient C = capture and in-hand verification required P = diagnostic photograph required S = specimen required

This checklist created for the New Hampshire Dragonfly Survey by

Pamela Hunt New Hampshire Audubon 3 Silk Farm Road Concord, NH 03301
